

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

*Retina*

A 64-year-old woman was watching TV when she noticed that her vision had become “dim” in her left eye. She felt well otherwise and had no pain. She came to the emergency room.

Vision was limited to light perception in the left eye, but right eye was 6/9. There was a left afferent pupillary defect. The fundus of the left eye showed narrowed vessels. Most of the retina was abnormally pale, and the macula showed a “cherry red spot”.
