Lacrimal Sac Lesion

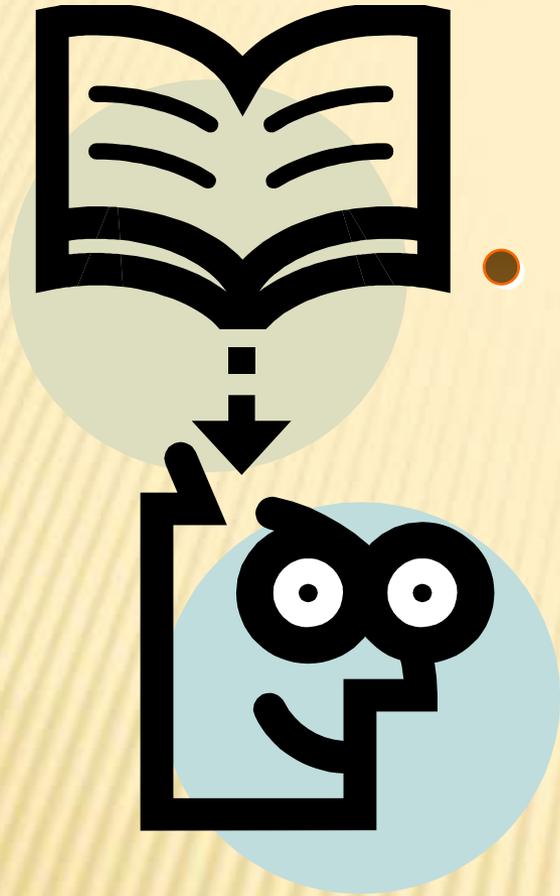

A 60-year-old woman complained of tearing and pain in her right eye. She had no history of trauma or surgery of the eyelids, nose or sinuses. She had tearing and discharge for several months. Recently she had developed a painful red lump near the right inner canthus. Examination showed her vision to be 6/6 OU. There was an erythematous swelling over the right lacrimal sac.

Lacrimal sac lesion

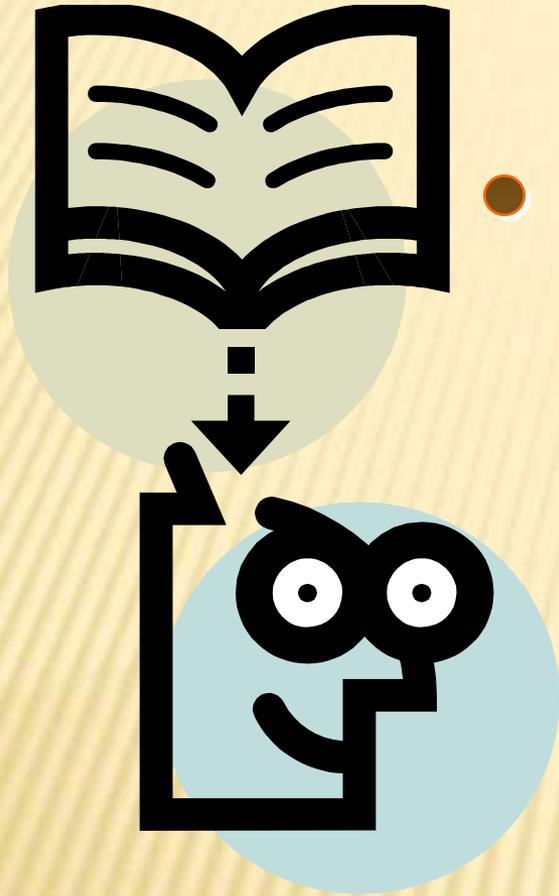

Clinical features

- Tearing
- Discharge
- Tender
- Sex

Diagnosis

- * Other causes of tearing
- * Examination and testing
- * ?? Probing
- * CT
- * Dacryocystography

Differential
diagnosis

Treatment
