

Nephrology unit

Services:

-The unit provides diagnostic evaluations, medical treatments, and follow-up monitoring for children who suffer from the entire spectrum of kidney and urinary diseases, including:

- Renal metabolic disorders
- Acquired and congenital renal disease
- Acute and chronic renal failure
- Terminal renal failure
- Nocturia (nocturnal enuresis)
- Hypertension in children up to age 18

-We provide integrative care, and specialists from our nephrology division collaborate with physicians in other medical disciplines to customize every patient's treatment program. Our team includes highly qualified pediatric nephrologists, nurses, dialysis technicians, and a dietitian – all specially trained to treat children.

- Dialysis activities provided include: intermittent hemodialysis, continuous renal replacement therapy, peritoneal dialysis, plasma exchange
