

**Course Specification 2015/2016**  
For the Medical Physiology (second year)

**Faculty :** Medicine  
**Department :** Medical Physiology

**Course Specification**

Programme(s) on which the course is given : M.B.B.Ch program  
Department offering the course : Department of Medical Physiology  
Academic year / level : 2<sup>nd</sup> year  
Date of specification approval : 29/11/2015

**A- Basic information**

Title: Medical Physiology Code: PSL.2  
Lecture: 150 Tutorial: Practical 60 Total: 210

**B- Professional Information**

**1 - Overall Aims of Course**

The overall aim of the course is to provide the students with the basic knowledge of physiology and develop several practical skills related to experimental work through training on several basic medical skills.

**2 – Intended Learning Outcomes of Course (ILOs)**

**A - Knowledge and Understanding:**

By the end of the course, students should be able to:

- A1- Identify the different components of CNS and role of each
- A2- Describe renal structure and explain functions of different parts of the nephron
- A3-Identify endocrinal glands and identify their functions, their regulation and homeostatic roles, discuss male and female reproductive function
- A4-Identify the special senses and explain the physiological anatomy of each sense
- A5- Explain the types of metabolic reactions, thermogenesis, food intake and their alteration during muscular exercise
- A6-Discuss different components of digestive system and its role in food ingestion, digestion, absorption and excretion

**B- Intellectual Skills:**

By the end of the course, students should be able to:

- B1- Integrate facts about function of different organs sub serving the homeostasis.as CNS, kidney, digestive system and endocrine gland
- B2- Solve medical problems on pathophysiological bases related to diagnosis and treatment of physiological problems as: PH disturbance, fluid and electrolytes disturbances, fever, hypothermia and sensory disturbances

**C-Professional and Practical Skills:**

By the end of the course, students should be able to:

- C1 Examine sensory function of CNS
- C2 - Elicit tendon jerk
- C3- Elicit superficial reflexes
- C4- Demonstrate small intestinal motility in isolated small intestinal segment of rabbit
- C5-Determine visual field
- C6-Determine visual acuity
- C7- Determine colour vision
- C8- Elicit light reflex and general reflexes

C9- Examine hearing acuity

C10- Compute renal clearance to study the kidney function

C11- Measure body temperature

C12- Perform pregnancy test

**D- General and Transferable Skills:**

By the end of the course, students should be able to:

D1. Adopt principles of the lifelong learning needs of the medical profession.

D2 Present information clearly in written, electronic and oral forms

D3 Work effectively within a team

### 3 – Contents

Topic	No. of hours	Lecture	Practical
<b><u>1- Central Nervous System</u></b> <b>1. Basic organization and functions of the central nervous system.</b> <b>2. The sensory system, and the sensory receptors.</b> <b>3. Sensations, and Neural coding of sensory information.</b> <b>4. Tactile sensations, Proprioceptive sensations, and Role of the cerebral cortex in somatic mechanoreceptive sensation.</b> The sense of touch. Proprioceptive sensations. Role of the cerebral cortex in somatic mechanoreceptive sensation. <b>5. Pain sensation, Pain Control System, and Headache.</b> Pain sensation. Pain Control System. Headache. <b>6. Thermal sensation.</b> <b>7. Synapses of the CNS.</b> Chemical synapses. Synaptic transmission. Postsynaptic receptors. Postsynaptic potentials. Presynaptic inhibition. Neurotransmitters in Central Nervous System The small-molecule neurotransmitters. Neuropeptides. <b>8. Motor functions of the spinal cord.</b> Functional classification of Spinal reflexes. Spinal reflex arc. Afferent neurons. Interneurons. Efferent neurons. The withdrawal reflexes. General properties of polysynaptic somatic spinal reflexes. The muscle stretch reflex. Properties of stretch reflex. Inverse stretch reflex. Skeletal muscle tone.	68	46 2 hour 2 hours 2 hours  3 hours  3 hours  2 hour 4 hours    4 hours	22    6 hours 2 hours 2 hours  8 hours

Large intestine						√	√						√									√	√	√

**4 – Teaching and Learning Methods**

Teaching Methods	Description
Lectures	Scientific material is presented through : 1- power point presentations 2- Animations & videos
Practical lessons	Each practical class is delivered in the following form : 1- Students are divided into 2 groups in 2 physiological laboratories 2- They have a short lecture to explain the background of the practical lesson (25 minutes) 3- Then each group is divided into small groups under supervision of demonstrators to do the practical part of the section (1 hour). 4- Then they record the data they have noticed in their practical books (20 mintues).
Self learning	PowerPoint presentation prepared by the student

**5 – Student Assessment Methods**

Method of assessment	Description	To Assess
1- Written examinations	- An exam at the end of the academic year - consist of short Essay Questions in different branches	A1-A2-A3-A4-A5-A6- B1-B2
2- MCQ exams	- 2 exams which are held in January & May	A1-A2-A3-A4-A5-A6- B1-B2
3- Practical examinations	- An exam held by end of the academic year. - Consists of 5 experiments in a form of multi-station	C1-C2-C3-C4--C5-C6-C7-C8-C9-C10-C11-C12
4- Sheet examination	- An exam held by end of the academic year. - Consists of 35 MCQ which are related to the practical classes.	C1-C2-C3-C4--C5-C6-C7-C8-C9-C10-C11-C12
5- Oral examinations	- held by the end of the academic year. - The student is examined by 2 different professors to assess his knowledge in all branches of physiology that was studied.	A1-A2—A3-A4-A5-A6- B1-B2
6- Essay and presentation		D1-D2-D3

## Assessment Schedule

- Written Examination 50 % (125 Marks)
- Structured Oral 8 % (20 Marks)
- OSPE 8% (20 Marks)
- Midterm MCQ 16 % (40 Marks)
- Sheet 14% (35 Marks)
- Log book 2% (5 Marks)
- Essay and presentation 2% (5 Marks)

Total 100% (250 marks)

## **6 – List of References**

- |                                     |  |
|-------------------------------------|--|
| 6.1- Course Notes                   | Staff member books & lecture notes   |
| 6.2- Essential Books (Text Books)   | a) Textbook of Medical Physiology (Guyton & Hall).<br>b) Review of Medical Physiology (William F. Ganong). |
| 6.3- Recommended Books              | Physiology (NMS)   |
| 6.4- Periodicals, Web Sites, ...etc | <a href="http://Advan.Physiology.org">http:// Advan. Physiology.org</a>                                    |

## **7 – Facilities Required for Teaching and Learning**

- a) Lecture halls.
- b) Audiovisual facilities.
- c) Virtual Library including multimedia teaching facilities.
- d) Publishing facilities including: Printers, photocopy machines.
- e) well-equipped laboratories.
- f) Laboratory animals.

**Course Coordinator :** Dr. Mohammed Adel

**Head of Department :** Prof. dr. Sabry Mohammed Awad Gad
