♣ Program Goals

□ Preparing qualified nurses trained to provide specialized nursing care to meet the needs of society and the labor market.

□ Raising health awareness by enhancing students' leadership role in society and their participation in improving the quality of health care and keeping pace with professional developments.

□ Qualifying students with the knowledge, skills and nursing attitudes necessary to perform

their role in society and solve problems related to their future work

□ Providing students with specialized skills and information that help them evaluate and solve patient problems to enhance the quality of health care.

□ Establishing effective partnerships with local and international educational organizations to provide an effective training environment that contributes to producing a graduate with nursing and specialized qualifications.

□ Refine students' abilities in effective communication skills with patients, colleagues, and members of the health team.

□ Preparing nurses who are ethical and professional in nursing ethics, who believe in the values of work perfection and honesty, and who are able to adapt and work in a team spirit.

□ Preparing competencies capable of dealing with information technology and the modern techniques used.

□ Preparing students to deal with advanced curricula compatible with international curricula.

Faculty vision

The Faculty of Nursing - Mansoura University seeks to be one of the best nursing colleges locally, regionally and internationally and to contribute effectively to improving the health system in Egypt.

Faculty mission

Faculty of Nursing - Mansoura University is a governmental educational and research institution that provides educational programs in nursing sciences to provide an academically and practically qualified graduate, produce scientific research, and support community health needs..

Program vision

Achieving excellence in specialized nursing education to meet the needs of society, keep pace with progress in various sciences, and keep pace with the labor market locally and internationally.

Program mission

The program seeks to graduate a qualified nurse with general and specialized nursing competencies that help him provide high-quality general and specialized nursing care using the acquired competencies that meet the needs of all levels of local, regional and international health institutions with distinct competitive efficiency keeping pace with global developments and strengthening the mechanisms of scientific research, self- and continuous education skills and the use of evidence. Research and community service.

An overview of the college

The Faculty of Nursing, Mansoura University, was established in 1994 by Republican Decree No. 287 of 1994. It aims

to graduate qualified nursing specialists for the labor market in various health institutions, as the college is considered the largest college that receives new students annually among Egyptian colleges. The college also seeks to achieve its strategic goals by expanding the infrastructure and equipment necessary to achieve excellence in all fields, developing and supporting the skills of leaders, faculty members and their assistants, and the administrative staff, developing the college's own resources, as well as modernizing the mechanisms of self-evaluation with the aim of excellence, renewing accreditation, and supporting the educational process to graduate distinguished cadres. The college develops graduate programs, quality scientific research, and maximizes the college's role in the field of community service and environmental development. The faculty is characterized by competitive features that make it one of the best nursing colleges in the republic. The college obtained the highest grades in the standardized test at the republic level among nursing colleges. It also obtained first place at the university level in the question bank competition. The college is distinguished by the only Arab Board certificate at the level of Egyptian universities. All educational programs at the college are based on credit hours. The college is unique in having distinguished postgraduate programs, such as the Master's program in Infection Prevention

and Control and the Master's in Evidence-Based Health Care. The college is also distinguished by the presence of international protocols in effect with many Arab and European countries.

Aims of the program

The program aims to:

1. Preparing qualified nurses trained to provide specialized nursing care to meet the needs of society and the labor market.
2. Raising health awareness by enhancing the student's leadership role in society and their participation in improving the quality of health care and keeping pace with professional developments
3. Qualifying students with the nursing knowledge, skills, and necessary attitudes to fulfill their role in society and solve problems related to their future work
4. Providing students with specialized information and skills that help them evaluate and solve patient problems to enhance the quality of health care
5. Establishing interactive partnerships with local and international educational organizations to provide an effective training environment that contributes to produce a graduate with nursing and specialized qualifications.
6. Refine students' abilities in effective communication skills with patients, colleagues, and health team members
7. Preparing nurses who possess professional nursing ethics and morals, who believe in the values of work perfection and

honesty, and who are able to embrace it and work in the spirit of one team.

8. Preparing competencies that capable of dealing with the technological information and modern techniques.
9. Preparing students to deal with advanced curricula compatible with international curricula.

The Program Mission

The program seeks to prepare a qualified nurse graduate with general and specialized nursing competencies that allow him to provide general and specialized high-quality nursing care by utilizing his acquired competencies that meet the needs of all levels of local, regional, and international health institutions with distinct competitive efficiency, keeping pace with global developments, strengthening scientific research mechanisms, as well as self-and continuous education skills, and using of research evidence and community service.

The Program Vision

Achieving excellence in specialized nursing education to meet the needs of society, keeping pace with progress in various sciences, and keeping pace with the labor market locally and internationally.

The Program Vision

Achieving excellence in specialized nursing education to meet the needs of society, keeping pace with progress in various sciences, and keeping pace with the labor market locally and internationally.

Program description

The Bachelor of Nursing Sciences in (Specialized) program provides knowledge, skills, and practical competencies in the field of general nursing (Major) that help to graduate qualified nurses who will be capable of meeting the needs of society and providing nursing care for different ages and at different levels of health-care. During the program, fundamental nursing, Geriatric nursing, obstetrics and gynecology nursing, pediatric nursing, community health nursing, psychiatric and mental health nursing, and nursing administration are studied. To achieve this, the student practices several skills in practical training on the general part “Major” and the specialized skills “Minor” that qualify him to provide nursing care. Studying in this program qualifies the student to use creative thinking and rely on evidence that enables him to make decisions in providing specialized nursing care. The program contains precise specializations that the student chooses during his study, and the nursing specializations that the student acquires through practical training differentiate according to the faculties and the needs of the community surrounding the faculty.

The Study System

1. The study system in this program is a credit hours system that is based on competency-based academic standards
2. The study in this program is divided into:
 - a- Study of general nursing (fundamental nursing, adult nursing, obstetrics and gynecology nursing, pediatric nursing, community health nursing, geriatric nursing, psychological and mental health nursing, nursing administration) (Major 104 CH).
 - b- Specialized study (academic paths) where the student chooses a nursing specialty from the specializations offered by the faculty. (Minor 46 CH).
3. The Faculty Council may decide to teach one or more courses in the hybrid education mode after taking the opinion of the relevant department council and depending on the nature of the academic courses. So, the study in the course is 60% face-to-face and 40% in the distance education system.
4. The study is in the English language.
5. The student's graduation certificate writes the specialized that he studied in the academic paths, in addition to his studies in general nursing

Duration of the study

- The duration of the study to obtain a Bachelor's degree in Nursing Sciences (specialized) is eight semesters (semester duration is 16 weeks) or when the student fulfills the requirements for obtaining the degree, including the minimum number of years of study of is three years and half, all in accordance with what is determined by the internal regulations of the colleges.
- After obtaining the bachelor's degree, the student must pass the internship year, which is a calendar year (12 months) in May, with 36 actual hours per week (Bachelor of Nursing Honors List).
- The Faculty Council may agree to open a summer semester, provided that the number of students is not less than 5 students in the course and does not teach nursing courses that have practical training.
- The duration of the summer semester ranges from eight to nine weeks (provided that the number of weekly hours for each course is doubled). The student registers for the semester for 9 hours, and only two additional hours are allowed in the event of graduation.

General conditions for admission

The faculty is subject to the admission system of Egyptian universities in force in the country, and in order to accept male or female students, they must meet the following conditions:

1. The student must have a high school in science or equivalent certificates, in accordance with the rules and regulations determined by the Supreme Council of Universities.
2. The student must be dedicated to studying.
3. The first foreign language the student studies must be English.
4. Passing aptitude tests in accordance with the rules and regulations determined by the Supreme Council of Universities
5. Passing the medical examination (the student must be free of physical or mental disability, chronic diseases, or infectious diseases, and there must be consistency between the student's height and weight
6. International students are subject to the same general conditions for admission as their Egyptian counterparts and in accordance with the rules set by the Supreme Council of Universities.

Justifications for creating the program

The Bachelor of Nursing Sciences (Specialty) program was created for the following reasons:

- The results of labor market studies for service beneficiaries revealed that a graduate of nursing education must have the specialized skills that serve the community and meet its needs. Therefore, the program was created to qualify graduates to provide high-quality nursing care with a focus on a nursing specialty chosen by the student and based on the needs of society.
- There is a severe shortage of jobs for nurses specializing in various clinical educational fields, which is reflected in the level of education and practice.
- There is a severe shortage in the category of professional nurses who have graduated from nursing colleges, which has led to a shortage of specialized nurses to work in subspecialty branches such as critical care and emergency nursing, obstetrics nursing, women's health, as well as oncology nursing, pediatric care nursing, and most branches of specialization.
- Implementing the recommendation of the International Council of Nursing, which stipulates that qualified nursing specialists must manage all nursing services in healthcare institutions of all types and that basic, post-basic, and

specialized nursing education programs should be performed by specialized nurses who are educationally and technically qualified.

- The program provides the student with the knowledge, skills, and competencies that qualify for work after graduation in the general and specialized nursing field by providing the opportunity to be creative and use research evidence in nursing practice to meet the needs of the patient and develop health care for the community.
