

Mansoura University
Faculty of Computers and Information Sciences

Course Specifications of

Elective 4 (Neural Networks) – 2017/2018

University: Mansoura University

Faculty: Computer and Information Sciences

Program on which the course is given: Undergraduate

Department offering the course: Department of Computer Science

Academic year/ Level: Forth Year

Date of specification approval:

A- Basic Information

Title : Elective 4 (Neural Networks)

Code : CS433P

Credit Hours : 3 **Lecture :** 2 **Practical :** 2 **Tutorial :** 0

B- Professional Information

1- Overall Aims of the Course

This course aims to:

- Introduce the principles, models and applications of neural networks and deep learning. The course will cover: machine learning principles, regression, classification, artificial neural network, perceptron, heb net, backpropagation algorithm, SOM, convolutional neural network, restricted Boltzmann machine, and deep belief network, recurrent neural network, LSTM and the related applications.

2- Intended Learning Outcomes of the course (ILOs)

By completing this course successfully, the student will be able to:

a- Knowledge and Understanding

- a1. Essential facts, concepts, principles and theories relating to computing and information and computer applications as appropriate to the program of study.
- a2. Modeling and design of computer-based systems bearing in mind the trade-offs.
- a3. Tools, practices and methodologies used in the specification, design, implementation and evaluation of computer software systems.
- a5. The extent to which a computer-based system meets the criteria defined for its current use and future development.
- a10. Current developments in computing and information research.
- a12. Understand the essential mathematics relevant to computer science.
- a17. Show a critical understanding of the principles of artificial intelligence, image, and pattern recognition.
- a19. Select advanced topics to provide a deeper understanding of some aspects of the subject, such as hardware systems design, object-oriented analysis and design, and artificial intelligence, and parallel and concurrent computing

b- Intellectual Skills

- b1. Analyze computing problems and provide solutions related to the design and construction of computing systems.
- b2. Realize the concepts, principles, theories and practices behind computing and information as an academic discipline.
- b6. Evaluate the results of tests to investigate the functionality of computer systems.
- b11. Perform comparisons between (algorithms, methods, techniques...etc).
- b12. Perform classifications of (data, results, methods, techniques, algorithms..etc.).
- b13. Identify attributes, components, relationships, patterns, main ideas, and errors.
- b17. Identify a range of solutions and critically evaluate and justify proposed design solutions.

c- Professional and Practical Skills

- c1. Operate computing equipment, recognizing its logical and physical properties, capabilities and limitations.
- c4. Apply computing information retrieval skills in computing community environment and industry.

- c5 Develop a range of fundamental research skills, through the use of online resources, technical repositories and library-based material
- c16 Evaluate systems in terms of general quality attributes and possible tradeoffs presented within the given problem.
- c21 Prepare technical reports, and a dissertation, to a professional standard.

d- General and Transferable Skills

- d1 Demonstrate the ability to make use of a range of learning resources and to manage one's own learning.
- d2 Demonstrate skills in group working, team management, time management and organizational skills.
- d3 Show the use of information-retrieval.

3- Contents

| No | Course Content | Lecture | Tutorial | Total |
|--------------------|--|-----------|-----------|-----------|
| 1 | Introduction to machine learning, Applications and challenges. | 2 | 2 | 4 |
| 2 | Supervised and unsupervised learning methods. | 2 | 2 | 4 |
| 3 | Linear regression and logistic regression | ε | ε | ∧ |
| 4 | Introduction to Neural networks | ε | ε | ∧ |
| 5 | Basic Neural network models e.g. McCulloch-pitts, heb net, perceptron and Adaline. | γ | γ | ε |
| 6 | Backpropagation algorithm and SOM neural network | 4 | 4 | ε |
| 7 | Deep learning and Convolutional neural network | γ | γ | ε |
| 8 | Unsupervised Pre-training model, , restricted Boltzmann machine, and deep belief network | 4 | 4 | ε |
| 9 | Recurrent neural network, long term short memory (LSTM) and GRU. | γ | γ | ε |
| Total Hours | | 24 | 24 | 48 |

4- Assessment Schedule

| Assessment Method | No. | Description | Week No. | Weight (%) |
|-------------------|-----|---------------------------------------|----------|------------|
| Assignment | 1 | Research report | 5 | 5 |
| Written Exams | 3 | Midterm Exam | 6 | 10 |
| Project | 5 | Practical project using deep learning | 1-10 | 15 |
| Oral Exam | 6 | Oral questions | 11 | 10 |
| Written Exams | 7 | Final Exam | 14 | 60 |
| Total | | | | 100 |

5- List of references

5.1 Course Notes

- Lecture handouts delivered to students at the end of each lecture.

5.2 Essential Books (Text Books)

- Fundamentals of Neural Networks: Architectures, Algorithms and Applications, by Laurene V. Fausett.
- Deep Learning, MIT, by Ian Goodfellow, Yoshua Bengio, Aaron Courville, 2016

6- Facilities Required for Teaching and Learning

- Data show.
- Speakers for audio and video files used to practice listening.
